DETAILED ACTION

Double Patenting

1. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

2. Claims 12-22, 24-28 and 30-37 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-11 of prior U.S. Patent No. 6,657,875. This is a double patenting rejection.

Claims 12, 19, 24 and 30 the input voltage ratio are $n:m$ and $p:q$ where n , m , p , and q are integer values, when the values are 1, 2 or 3 they become a duplicate claim of the patent claims.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 23, 29 and 38-42 are rejected under 35 U.S.C. 102(b) as being anticipated by Nork (5,973,944).

Nork discloses an inductorless step-up and step-down converter with inrush current limiting in Fig. 2. Step-up and step-down regulated converter 200, capacitor 202, input voltage V_{in} , switches 204, 206, 208 and 210, controller 22, In step-up conversion control 220 sends control signals to alternatively turn ON and turn OFF switches 206 and 210 and switches 204 and 208 and in the step-down conversion control 220 sends signal to keep turn OFF switches 206 and 210 and turn ON switches 204 and 208. See col. 6, lines 8-65.
